

Trellis Entryway System

ZONE 1 | OUTSIDE

ZONE 2 | OUTSIDE & INSIDE

ZONE 3 | INSIDE

A well designed entrance system plays a vital role in providing a safe, clean and attractive entrance way. The best and most cost effective solution for decreasing maintenance costs is an effective entrance matting system. Signature's Trellis Entryway System can be a 1, 2, or 3 zone system, with performance ranked by the number of zones utilized. A single mat achieves good results, but a three-zone entrance matting system achieves superior performance.

ZONE 1	ZONE 2	ZONE 3
OUTSIDE Scrapes Heavy Debris	OUTSIDE INSIDE Cleans & Absorbs Moisture	INSIDE Absorbs Moisture & Dries
Within commercial buildings more than 80% of the dust, dirt and grime is tracked in from the outside from foot traffic. This tracked-in soil affects not only the appearance of interiors, but also the quality of air.	Studies show that one square yard of commercial carpeting can accumulate a pound of dirt per week and up to two pounds during wet weather.	Within commercial buildings more than 80% of the dust, dirt and grime is tracked in from the outside from foot traffic. This tracked-in soil affects not only the appearance of interiors, but also the quality of air.

It is recommended that a minimum of 5 to 6 steps or 18 linear feet from Zone 1 to Zone 3 be required to effectively keep dirt out. By using a zone system you will lower your maintenance costs, achieve better air quality and have a safer building by reducing the opportunity of slip-fall accidents.
